ABOUT US

Ronak Rocks is a segment of Ronak Group— a conglomerate company with vast experience in different segments of commerce and business. Ronak Rocks since its foundation has revolutionised the natural stone industry. Since then we have been one of the leading suppliers of natural stone globally. Ronak Rocks is famed to source and procure natural stones from and around the world.

Ronak Rocks has successfully acquired the customer's trust and reliability through our accelerated service. We have grown stronger with utmost dedication and consistent hard work. Over time we have grown out and forward to bring the elements of fine design and colours to ensure that living spaces get a unique definition through natural stones.

WHY CHOOSE RONAK ROCKS?

Because you will never be out of qualitative options at Ronak Rocks. Apart from procuring the highly demanding rocks from our quarries, we bring a plethora of natural stones from and around the corner of the world. From classic evergreen to utmost modern, you will find all colours and designs available at Ronak Rocks.

OUR MISSION

- Consistent Growth
- Unmatched Quality
- Determined to Excellence

OUR VISION

We aim to be an unwavering source of suppliers in the industry of natural rocks and stones and be a global player in the intercontinental market through relationship building.

Our Products

Ronak Rocks Pvt. Ltd. is a professionally managed organization engaged in the production of a variety of stone products in various sizes and finishes. Our range of natural stones and natural building stones includes Granites, Marbles, Sandstone, Slate, Limestone, ONYX.

GRANITE

Granite is a natural stone that is formed from molten lava and primarily composted of quartz. Like marble & limestone, granite is quarried from mines.

MARBLE

Marble is a very hard stone that makes it easy to carve or sculpt. With progressive, fine sanding, it can also be polished to a very high finish.

ONYX

Commonly, specimens of onyx contain bands of white, tan, and brown. Unlike granite or marble, Onyx is also mentioned in the Bible at various points.

QUARTZ

Quartz Stone tiles are a man-made conglomerate produced by combining a mix of natural quartz stones, resin, crushed mirror flecks, and colour pigment. Unlike Ceramic & Porcelain tiles, Quartz is manufactured in large slabs, calibrated and polished. The slabs are then graded and cut into the individual tile sizes.

AGATE

Natural agate is a glassy, colourless, variety of microcrystalline quartz. The agate gemstone is used as a semiprecious stone when it is of appealing colour and quality.

KOTA STONE

Kota stone gets its name from the Kota region in Rajasthan, which is where it originates from. Made of fine-grained lime-stone, this sedimentary rock is hard and compact and homogenous in cross section.

SANDSTONE

Sandstone tile is known for its characteristic grainy and porous texture and tactile appeal. Sandstone evokes a barren, wind-swept landscape, with swirling colors of gold, red, yellow sandstone tile and worn ivory sandstone tile.

SLATE STONE

Slate is a fine-grained, foliated, homogeneous, metamorphic rock. Slate can be made into roofing slates, also called roofing shingles. Slate tiles are often used for interior and exterior flooring or wall cladding. Tiles are installed and set on mortar and grouted along the edges.

VENEERS

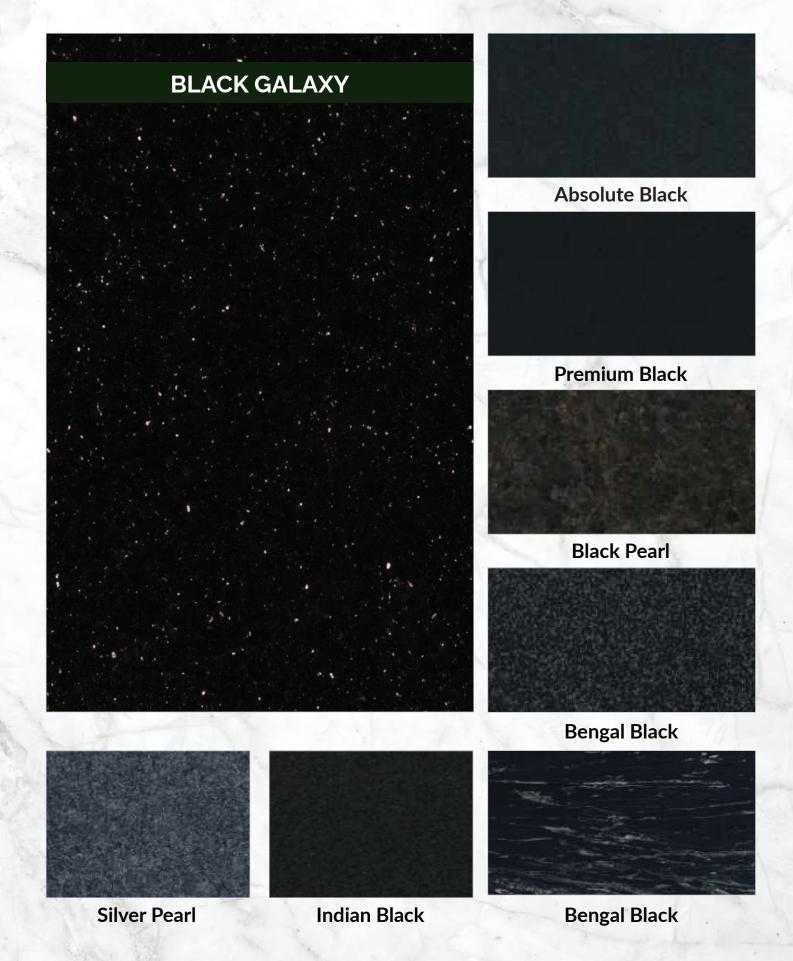

Stone veneer is a thin layer of any stone used as decorative facing material that is not meant to be load bearing. Stone cladding is a stone veneer, or simulated stone, applied to a building or other structure made of a material other than

MOSAICS

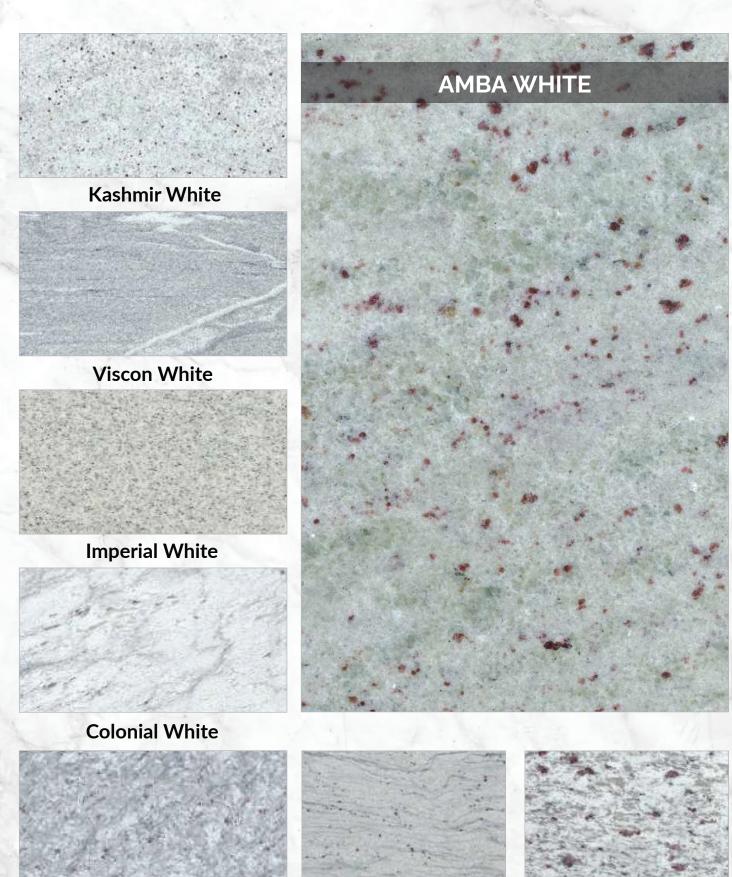

A mosaic is a pattern or image made of small regular or irregular pieces of colored stone, glass or ceramic, held in place by plaster/mortar, and covering a surface. Mosaics are often used as floor and wall decoration, and were particularly popular in the Ancient Roman world.
